Long Term Conditions

SHARED CARE PLANS – Presented by Viv Williams

viv.williams@wellsouth.org.nz PH: 021 583 876

The overarching goal of the CLIC programme is supporting the client who has a long term condition to self manage their condition in partnership with their primary health care providers.

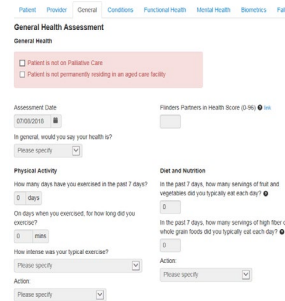

What is the Client Led Integrated Care (CLIC) programme?

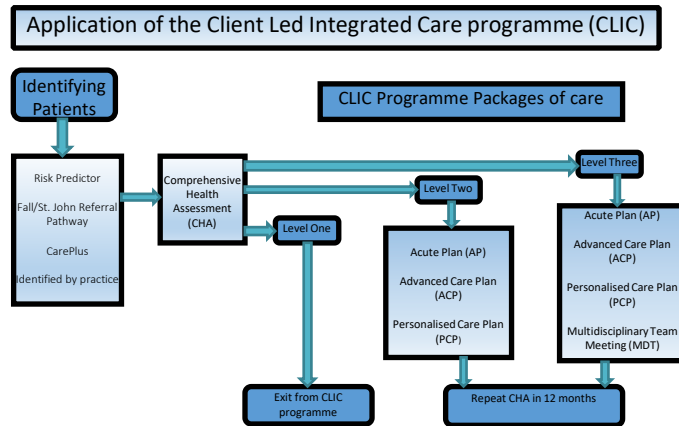

- Replaces CarePlus
- Grounded in building self-management capabilities
- Enhances health literacy of people with long term conditions
- Improves communication across the system to improve planned and acute care
- Offers funding packages most appropriate to clients level of need
- Begins with a Comprehensive Health Assessment (CHA)

Key Milestones/Achievements:

- Commitment to the success of the roll out from Day 1
- User testing and redevelopment on the fly
- Growing the process from the ground up
- Shifted funding to people that need it the most
- Opportunity to deliver care in an innovative way back to the practice

First tab of Comprehensive Health Assessment Tool

How has CLIC been instituted into Practice?

- User testing sites commenced September 2017
- Full rollout commenced early 2018
- Commencement of CLIC only begun with agreement of timing with each practices
- A four hour education session offered to clinicians within practices
- A Long Term Conditions nurse supported the practice on site on the day they changed from CarePlus to CLIC

What next after CLIC introduced?

- Ongoing support for practice nurses with Long Term Conditions nurse
- Education for clinicians around care planning with their clients
- Utilizing multi-disciplinary team for level 3 clients

Some Learning and Challenges for Practices

- Time challenge with one hour being allocated to CHA
- Upskilling required around care planning
- Practices need follow up and support with such a big change
- Beginning the conversation about Advanced Care Planning
- Being unable to access Health One in the initial stages of rollout
- Explaining the changes to clients, especially if they are level 1

Feedback from practices using the CLIC programme

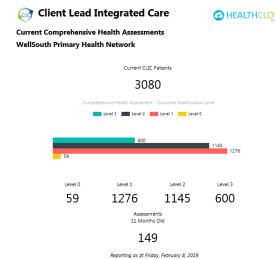

- "We've found the CLIC [programme] to be a helpful tool, especially for the high needs patients we care for"
- "Our nurses are saying that the CLIC programme identifies medical conditions that haven't been recognised in the past and that CLIC is very thorough."
- "Some of patients have requested CLIC after hearing good things from other patients"
- "We are looking forward to seeing how CLIC impacts the overall health of our patient population"
- "Our patients have really appreciated having their healthcare team set aside time to truly listen to the things that are important to them."
- "Our therapeutic relationships with our patients have become deeper as we learn more about them."
- "We have learnt things about our patients that wouldn't have otherwise come up in a standard consult, and because of this we are able to work on a more personalised care plan that is actually relevant and beneficial to our patients."

RN Nicola Stout discusses with her patient what the Comprehensive Health Assessment means

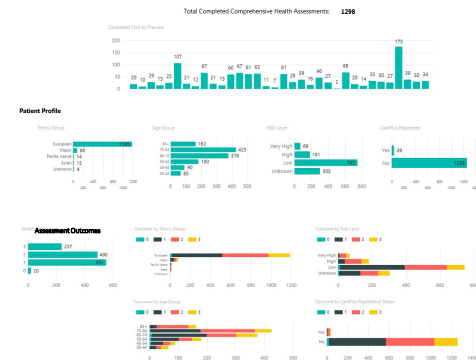

The Numbers So Far

Currently CLIC has been rolled out to a total of 43 General Practices across the WellSouth PHO.

Completed Comprehensive Health Assessments

Tuckman's Change Model

STORMING

Assumptions

Remaining Calm

**PLEASE DON'T SHOOT THE
MESSENGER**

Norming Stage

Performing Stage

What worked well:

- Relationships which were developed
- Being the key contact person for Care Plans

What did not work so well:

- Resources on Health Navigator were not clear
- Too many changes introduced at once

Conclusions

- Video
- Laminated steps for each care plan
- Teach one care plan at a time
- Have more, more timely collegial support in the different geographical areas
